

Fleetclear Connect

FleetclearTrack – Quick Self-Install Guide (OBD)

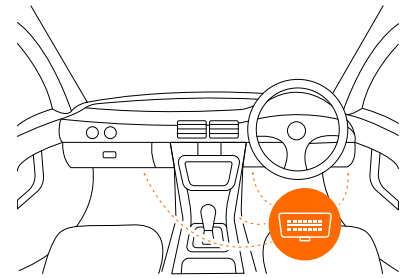

What You Need

- OBD device supplied by Fleetclear
- Access to your vehicle
- The vehicle key

Fitting the Tracker

- Locate the vehicle's OBD port. This is usually found beneath the dashboard on the driver's side.
- With the ignition switched off, align the tracker with the OBD port and push firmly into place.
- Make sure the device is fully inserted and secure.
- Position the tracker so it does not interfere with pedals, trim panels, or normal driving operation.
- In some vehicles, the OBD port may sit behind a small cover or trim flap. Remove this if required and refit once installation is complete, where possible.

Most common OBDII connector locations.

Final Checks

- Start the vehicle or switch on the ignition.
- Your device should power up automatically once connected.
- All trackers are pre-configured with the vehicle registration and or asset ID prior to dispatch.
- Login to your Fleetclear Connect account by visiting app.fleetclear.com in your browser. You should have received your login details before receiving the tracker.
- Your asset should appear in your account within a few minutes.
- Once confirmed online, ensure the tracker remains securely fitted and does not obstruct the driver area.

Support

If the device doesn't appear online:

- Remove and reconnect the tracker, ensuring it is fully seated in the OBD port
- Check the ignition has been switched on or the vehicle has been driven briefly
- Confirm the OBD port is free from dirt or damage
